

Manufacturer's declaration

We, Družstevní závody Dražice - strojírna s.r.o. produce in accordance with valid parts of DIN 4753 (Water heaters, water heating installations and storage water heaters for drinking water).

All used materials correspond to prescribed standards and regulations. All plastic parts match requirements of ISO 15875 and are suited for drinking water (100% food-safe). The observance of the standards and regulations is checked yearly by accredited testing center (SZÚ Brno).

We can exclude that inadmissible pollutants, sediments, particles, bacteria and other substances of every kind to the custom's water are delivered by our product.

The tank types are made from the steel S235JR (1.0037) according to ČSN EN 10025, the insides of the tanks are enameled according to DIN 4753.

Enamel is an alkali-borosilicate glass, it is a natural material. The only solvent in the production process is water. The basic feature of enamelling is that it introduces no dangerous substances, e.g. lead, cadmium or solvents. Enamel is so absolutely free of risk for health. It is used for devices in hospitals, food industry, etc.

Enameled steel is a recyclable material. We separate all scrap and waste materials for recycling purposes following the ISO 14001:2005 accreditation for our Environmental Management System.

The statements above are audited every year by the independent inspection authority of SZÚ Brno.

Dražice, October 13, 2020

Karel Pacourek
